Patent No. 6522865

GENERAL INFORMATION:

TITLE OF INVENTION: Method and Compositions for Modulating ACE-2 Activity

TILE REFERENCE: PF57

CURRENT APPLICATION NUMBER: US/10/158,847

CURRENT APPLICATION NUMBER: US/295,004

PRIOR FILING DATE: 2002-06-03

PRIOR FILING DATE: 2001-06-04

NUMBER OF SEQ ID NOS: 158

SOFTWARE: Patentin version 3.1

SEQ ID NO 142

LENGTH: 805
                                                                                                                                                                                                                                                                                                                                                                                                                                      480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                138

Sequence 11284, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;

FILLE REFERENCE: CL001307

CURRENT FILING DATE: 2000-04-14

PRIOR PLILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SEQ ID NO 11284

LENGTH: 819
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                               Sequence 140, Application US/10158847

Patent No. 6592865

GENERAL INFORMATION

APPLICANT: Tom Parry et al.

IITLE OF INVENTION: Method and Compositions for Modulating ACE-2 Activity FILE REPRENCE: PPS57

CURRENT APPLICATION NUMBER: US/10/158,847

CURRENT FILING DATE: 2002-06-03

PRIOR FILING DATE: 2001-06-04

NUMBER OF SEQ ID NOS: 158

SSCPWARE: Patentin version 3.1

ERNGTH: 681
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          44 MNNAGDKWSAFLKEQSTLAQMYPLQEIQNLTVKLQLQAQNGSSVLSEDKSKRLNTILN

                                                                                                                                                                                                                                                                                                    Sequence 138, Application US/10158847
Patent No. 6592865
GENERAL INFORMATION
APPLICANT: Tom Parry et al.
TITLE OF INVENTION: Method and Compositions for Modulating ACE-2 Activity FILE REFERENCE: PFEST
CURRENT APPLICATION NUMBER: US/10/158,847
PRIOR PILING DATE: 2002-06-03
PRIOR FILING DATE: 2001-06-04
NUMBER OF SEQ ID NOS: 158
SOFTWARE: Patentin version 3.1
LENGTH: 711
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MINAGDKWSAFLKEQSTLAQMYPLQEIQNLTVKLQLQALQQNGSSVLSEDKSKRLNTILN

The present invention relates to a crystal (I) comprising an angiotensin-
converting enzyme-related carboxypeptidase (ACE2) or its homolog. (I) is
useful for detecting chemical compounds such as ligand, antagonist,
agonist, inhibitor, antibody, peptide, protein or drug having capability
of binding to the active site of the ACE2 protein. The present sequence
is human ACE2, used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Crystal of angiotensin-converting enzyme-related carboxypeptidase or its homolog, useful for detecting compounds e.g. ligands capable of binding to angiotensin-converting enzyme-related carboxypeptidase.

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine cutcimmune/inflammatory disorder, developmental disorders, endocrine disorder, neurological disorders; gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline polymorphisms, as molecular weight markers, and for somatic or germline connection. Note: The sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

ACE-2 is expressed predominantly in kidneys and testis. The sequence of the full length ACE-2 cDNA was determined from a clone obtained from a cDNA library prepared from mNNA of a human heart of a subject who had congestive heart failure. ACE-2 has significant sequence homologies with ACE enzymes, and has also been shown to hydrolyse angiotensin I into Ang. (1-9). The ACE-2 therapeutics are used to treat blood pressure related diseases and conditions, such as hypertension, congestive heart failure, chronic heart failure, acute heart failure, myocardial infarction, atherosclerosis and renal failure
                                                                                                                                                                           Human; angiotensin converting enzyme-2; ACE-2; angiotensin I; Ang.(1-9); blood pressure; hypertension; congestive heart failure; atherosclerosis; chronic heart failure; acute heart failure; myocardial infarction; renal failure.

                                                                    treatment of
                                                  This is amino acid sequence #1 of human MPROTIS. The MPROTIS polynucleotide and polypeptide sequences can be used for the treatment of Mypetrension, myocardial diseases, apoplexy, heart diseases, nervous denaruration, Alzheimer's disease and diseases related to the processing of peptide hormones and cytokines
                                                                                                                                                                                                 9
                                                                                                                                                                                                                      78

The invention relates to the metalloenzyme Zace2. Zace2, an angiotensin-
converting enzyme is a zinc metallopeptidase that plays roles in blood
pressure regulation and fertility. Zace2 can be expressed by standard
recombinant methodology. Zace2 polypeptides are useful for treating an
inflammatory bowel disease (e.g. Crohn's disease and ulcerative colitis),
diseases associated with inflammation like arthritis and enterocolitis,
as targets for identifying modulators of zinc protease activity, for
careening or identifying mew angiotensin-converting enzyme (ACB)
inhibitors, and as a basis for rational drug design for inhibitory
molecules. The nucleic acide can be used to detect the expression of a
cace2 gene in a biological sample, as probes for in vivo diagnosis and
for detecting and localizing Zace2 gene expression in tissue samples, to
determine whether a subject's chromosomes contain a mutation in the Zace2
gene, and to detect aberrations associated with the Zace2 locus.
Inhibitors of ACE are used for treating hypertension of various
conditions, including left ventricular systolic dysfunction, progressive
to dysfunction, and treatment of atherosclerosis. Zace2 agonists may be
used to treat infertility while Zace2 antagonists are used for inducing
infertility. The present sequence represents the human Zace2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

for sequence specific modulation of gene expression or in the analysis of single base-pair mutations in the gene. Nucleic acid sequence encoding ACE-2 is useful in therapputics, diagnostics and in screening assays. ACE-2 antagonist is used to treat hypertension or congestive heart failure (CHF). ACE agonist is used to reduce the inflammation and pain resulting from an insect sting or bite, which was accompanied by an injection of bradykinin. Anti-ACE-2 antibodies are used to monitor ACE-2 protein abserrant protein level
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; angiotensin converting enzyme-2; ACE-2; therapy; hypertension; peptidyl dipeptidase A; blood pressure; hypotension; atherosclerosis; myocardial infarction; heart failure; arrhythmia; renal failure; gene; inflammation; fertility; enzyme; BC 3.4.15.1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to human angiotensin converting enzyme-2 (ACE-2) polypeptides and polynucleotides. ACE-2 is also known as peptidyl dispeptidase A (EC 3.4.15.1). Polypeptides of the invention are useful for treating or preventing the development of abnormal blood pressure and diseases or disorders associated with the protein in a subject. The diseases include hypertension, hypotension, congestive heart failure, chronic heart failure, mycoardial infarction, atherosclerosis, arrhythmia and renal failure. They are also useful for treating inflammatory conditions and diseases relating to fertility. The present sequence is human full-length ACE-2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240

nucleic acid sequence at one or more polymorphic positions in a gene encoding a protein selected from the group above; (3) constructing (M2) haplotypes using the genes comprising grouping at least two nucleic acids ; (4) identifying (M3) an individual at risk of developing a disorder upon administration of an ACE inhibitor and/or vasopeptidase inhibitor comprises one or more polymorphic positions within a gene encoding a human protein selected from the group above; and (6) genotyping (M4) an individual comprising obtaining a nucleic acid sample, determining the nucleotide present in at least one polymorphic position, and comparing an individual comprising obtaining a nucleic acid sample, determining the and composition with a known data set. The genes (M1, M2, M3 and M4) and compositions are useful for detecting, diagnosing, treating, preventing various disorders such as angioedaem and diseases which Involve anglogenesis like hemoralisms, tumours, sarcomas, Crohn's disease, trachomas, and cardiovascular diseases like angina pectoris, hypertension, heart failure, myocardial infarction, ventricular hypertrophy, vascular diseases, aneurysm, embolism, thrombosis, coronary artery disease, arteriosclerosis and/or atherosclerosis, and artery disease, arteriosclerosis and/or atherosclerosis, and arthritis, reactions, sepsis, autoimmune diseases, inflammatory arthritis, cancer, wounds, viral, bacterial or fungal infection, Chronic obstructive pulmonary disease (COPD) and enterocolitis (many other polymucleotides are also useful for chromosome identification. Antibodies against the proteins may be utilised for immunophenotyping of cell lines and biological samples. The present sequence represents one of the The invention relates to an isolated nucleic acid from a human gene encoding aminopoptidase P (KRNER), bradykinin receptor B1 (BDKRB1), tachykinin receptor B1 (RAKR1), c1 esterate inhibitor (CINH), kallikrein 1 (KLK1), bradykinin receptor B2 (BDKRB2), angiotensin converting enzyme 2 ACR2) or professe inhibitor 4 (FI4), comprising at least one polymorphic position. Also included are (1) a probe that hybridises to a polymorphic position as provided in the detailed summary of single mucleotide polymorphisms comprising additional 5: and 3: flanking genomic sequence; (2) analysing (M1) at least one mucleic acid sample comprising obtaining the sample from one or more individuals and determining the proteins listed above

The invention relates to an isolated nucleic acid from a human gene encoding aminopeptidase P (XPNBP2), bradykinin receptor B1 (BDKRB1), trachykinin receptor B1 (TACR1), C1 esterase inhibitor (C1NH), kallikrein 1 (KLK1), bradykinin receptor B2 (BDKRB2), angiotensin converting enzyme 2 (ACR2) or protease inhibitor 4 (P14), comprising at least one polymorphic position. Also included are (1) a probe that hybridises to a polymorphic position as provided in the detailed summary of single nucleotide polymorphisms comprising additional 5, and 3, flanking genomic sequence; (2) analysing (M1) at least one nucleic acid sample comprising Disclosure; Fig 37; 977pp; English.

concaining the sample from one or more polymorphic positions in a gene encoding a protein selected from the group above; (3) constructing (M2) encoding a protein selected from the group above; (3) constructing (M2); (4) identifying (M3) an individual at risk of developing a cides caids. (5 identifying (M3) an individual at risk of developing a disorder upon administration of an ACE inhibitor and/or vasopeptidase inhibitor can the polymorphic date; (5) a library of nucleic acids, each of which comprises one or more polymorphic positions within a gene encoding a human protein selected from the group above; and (6) genotyping (M4) an individual comprising obtaining a nucleic acid sample, determining the nucleotide present in at least one polymorphic position, and comparing at least one position with a known data set. The genes, (M1, M2, M3 and M4) and compositions are useful for detecting, diagnosing, treating, preventing various disorders uch as angloedame and diseases which involve anglogenesis like haemangiomas, tumours, sarcomas, Crohn's disease, trachomas, and cardiovascular diseases like angina pectoris, hypertrophy, vascular diseases, tumours, mortricular chypertrophy, vascular diseases, autoimmune diseases, and attery disease, arteriosclerosis and/or atherosclerosis, and attery disease, wounds, viral, bacterial or fungal infection, chronic obstructive pulmonary disease (CPD) and enterocolitis (many other articular allocations are listed in the specification). The contraction contraction contraction the precification in the precification, and chronic contraction and contractions are also when the specification in the contraction and contractions are also when the contraction and contractions are also when the contraction and contractions are also when the contractions are also when the contractions are also when the contra polynucleotides are also useful for chromosome identification. Antibodies against the proteins may be utilised for immunophenotyping of cell lines and biological samples. The present sequence represents a polymorphic variant of one of the proteins listed above sample from one or more individuals and determining the

Š

The present invention describes a new method of treating a body weight disorder, increasing muscle mass and decreasing body fat by disorder, increasing muscle mass and decreasing body fat by administration of angiotensin converting enzyme (ACE) -2 medulating compound. The invention can be used for treating body weight disorders, particularly obesity of at least grade 1, diabetes, atherosclerosis and a staticularly obesity of at least grade 1, diabetes, atherosclerosis and a staticularly obesity of at least grade 1, diabetes, atherosclerosis and a staticularly obesity of at least grade 1, diabetes, atherosclerosis and staticular lipodystrophy, familial partial lipodystrophy, generalised partial lipodystrophy, familial partial lipodystrophy, compestive heart failure, chronic heart failure, left ventricular hyperrophy, acute heart failure, neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disease and Huntington's disease), alsease, parkinson's disease and Huntington's disease), myocardial infarction, cardiomyopathy, systemic inflammation response syndrome, sepsis, polytrauma, inflammatory bowel disease, acute and

chronic pain, bone destruction in rheumatoid arthritis and osteoarthritis and periodontal disease, dysmenorrhoea, premature labour, brain oedema following focal injury, diffuse axonal injury, stroke, reperfusion injury, cerebral vesospasm after subarachnoid haemorrhage, allergic disorders including asthma, adult respiratory distress syndrome, wound healing and scar formation. The invention decreases the appetite, increases muscle mass and decreases body fat of subject having body mass index of greater than 23 (preferably 24.9)kg/m²2. The present amino acid sequence represents the human ACE-2 protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            378

The invention relates to an isolated polypeptide, comprising fully defined human Zace2, murine Zace-5, or murine Zace2-10 polypeptide. An expression vector containing Zace2 polymuclecited is useful for producing Zace2 protein. The polymuclecitie is useful for producing Cace2 protein. The polymuclecitie is useful as a diagnostic probe for detecting a product of Zace2 gene expression in a biological sample. The polypeptide is also useful for decreasing inflammation associated with a condition such as inflammatory bowel disease, arthritis or enterocolitis. The polypeptide is useful for producing labelled angiotensin II, for identifying modulators of Zinc protease and candidensin II, for identifying modulators of Zinc protease activity and for identifying angiotensin converting enzyme (ACB) inhibitors. The polymuclecide is useful in gene therapy techniques to treat the above mentioned disorders. The polymuclectide is also useful for determining whether a subject's chromosome contains a mutation in the Zace2 gene. The present sequence represents the amino acid sequence of human zinc metallopeptidase Zace2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   QECLLLEPGLNEIMANSLDYNBRLWAWESWRSEVGKQLRPLYBEYVVLKNEMARANHYED 180
                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated human or murine Zace2 polypeptide useful for reducing inflammation in conditions such as inflammatory bowel disease, arthritis, enterocolitis, ulcerative colitis and Crohn's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                LAOMYPLOEI ONLTVICLOLOALOONGSSVLSEDKSKRLNTILNTMSTIYSTGKVCNPDNP

                                                                                                                                                                                                                                                                   셤
```

The invention relates to novel isolated angiotensin converting enzyme (ACE)-2 binding polypeptides (I), which are useful for treating, preventing or ameliorating hypertension, congestive heart disease in an animal. The peptides are useful for detecting, isolating, or purifying ACE-2 like polypeptides in solutions, mixtures, or biological samples; for inhibiting or reducing stenosis, pain, diseases or disorders related to vasconstriction, and diseases and/or diseases or disorders related to vasconstriction, and diseases and/or disorders associated with aberrant actions, and also to identify or remove ACE-2 tro detect, diagnose, prognose, or monitor or remove ACE-2; to detect, diagnose, prognose, or monitor cardiovascular diseases, and disorders associated with aberrant actions of ACE-2; to detect, diagnose, prognose, or monitor cardiovascular diseases, and disorders associated with aberrant all disorders equipmental and successive and disorders associated with aberrant caldsteppes of ACE-2; to detect, diagnose, prognose, or monitor cardiovascular diseases, and disorders associated with aberrant caldsteppes of ACE-2; to detect, diagnose, prognose, or monitor cardiovascular diseases and biological samples by their ACE-2 remotherory pains of cell lines and biological samples by their ACE-2 expression, and for identifying cells, such as cardiac myocytes, cardiovate, prauma, dermating, preventing, or ameliorating diseases or disorders associated with hypotensin, isohemia, asthma, allergy, multiple sclerosis, cancers, Parkinson's and Alzheimer's diseases, rheumatoid active hepatifis, Grohn's disease, crondosis, AlDS, and sepsis. In an example of the invention, ACE-2 activiting peptides were isolated from a number of peptide display or betting peptides were isolated from a number of peptide display or betting peptide semilies. This sequence represents a human angiotensin converting curyme 2-like protein. 480 540 138 258 438 9 78 319 GLPNYTQGFWENSMLTDPGNVQKAVCHPTAWDLGKGDFRILMCTKVTWDDFLTAHHEMGH STIEEQAKTFIDKFNHEAEDLFYQSSLASWNYNTNITEENVQNWNNAGDKWSAFLKEQST YGDYWRGDYEVNGVDGYDYSRGQLIEDVEHTFEEIKPLYEHLHAYVRAKLMNAYPSYISP 199 YGDYWRGDYEVNGVDGYDYSRGQLIEDVEHTPEEIKPLYEHLHAYVRAKLMNAYPSYISP IGCLPAHLLGDMWGRFWTNLYSLTVPFGQKPNIDVTDAMVDQAWDAQRIFKEAEKFFVSV GLPNMTQGFWENSMLTDPGNVQKAVCHPTAWDLGKGDFRILMCTKVTMDDFLTAHHEMGH LLKQALTIVGTLPPTYMLEKWRWNVPKGEIPKDQWMKKWWEMKREIVGVVEPVPHDETYC STIEEQAKTFLDKFNHEAEDLFYQSSLASWNYNTNITEENVQNMNNAGDKWSAFLKEQST LACMYPLOBIQNITVKLQLQALQQNGSSVLSEDKSKRLNTILNTMSTIYSTGKVCNPDNP QECLLLEPGLNEIMANSLDYNERLWAWESWRSEVGKOLRPLYEEYVVLKNEMARANHYED IQYDMAYAAQPFLLRNGANEGFHEAVGEIMSLSAATPKHLKSIGLLSPDFQEDNETEINF Gaps ö 100.0%; Score 3231; DB 6; Length 805; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method for increasing vasoconstriction or ameliorating a disorder resulting from low blood pressure, which comprises administering to an individual an amount of angiotensin II in combination with angiotensin 1-9. Angiotensin has hypertensive and vasotropic activities, and can be used in vaccines. The method is useful to intraeasing vasoconstriction or ameliorating a disorder resulting from low blood pressure, such as hypotension, shock or syncope. ABR56503 to ABR56708 represent angiotensin converting enzyme 2 (ACE-2) binding peptides, ABR56709 to ABR56725 and ACC79021 to ACC79025 represent sequences used in the exemplification of the present invention. Human ACE 2 is located to chromosome K, more specifically to Xp22. N.B. ABR56503 to ABR56572 represent SEQ ID NO:1 to 10 and should be the same as ABR56731 to ABR56582, but the Z's given at the beginning and end of the peptides in the disolosure have been expanded to Glx in the Sequence Listing and in this case the Z's do not represent Gln or Glu (see pages 1 to 7). SEQ ID NO:40 to 136 in the Sequence Listing (see also pages 7 to 10) have been specified as SEQ ID NO:20 to 116 in Example 1 (see pages
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Increasing vasoconstriction or ameliorating a disorder resulting from low blood pressure, e.g. hypotension, shock or syncope, comprises administering an angiotensin II in combination with angiotensin 1-9 to an individual.

Human angiotensin converting enzyme-2 (ACE-2) N720D

```
The invention describes a compound that modulates bioactivity of an anglotensin converting enzyme-2 (ACE-2) polypeptide. The compound is identified by contacting an ACE-2 polypeptide with a test compound under conditions for modulation of the bioactivity of the polypeptide; and detecting modulation of the bioactivity of the polypeptide by the test compound as compared to a control. Also described is a method for modulating the bioactivity of an ACE-2 polypeptide by contacting the ACE-2 polypeptide by contacting the ACE-2 polypeptide by contacting the ACE-2 polypeptide with a compound that has been identified. The method is useful for identifying a compound that modulates the bioactivity of anglorensin converting enzyme-2 peptides. The inventive method identifies other potential substrates of ACE-2 polypeptides and the product of the enzymatic reaction. The comparison of the mass spectra of the test compound was converted into a new compound, in which case the test compound is a substrate of the ACE-2 polypeptide. This is the amino acid sequence of human angiotensin converting enzyme-2 (ACE-2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

The invention describes a compound that modulates bioactivity of an angiotensin converting enzyme-2 (ACE-2) polypeptide. The compound is dentified by contacting an ACE-2 polypeptide with a test compound under conditions for modulation of the bioactivity of the polypeptide; and detecting modulation of the bioactivity of the polypeptide by the test compound as compared to a control. Also described is a method for modulating the bioactivity of an ACE-2 polypeptide by contacting the ACE-2 polypeptide by contacting the ACE-2 polypeptide by contacting the ACE-2 polypeptide with a compound that has been identified. The method is angiotensin converting a compound that modulates the bioactivity of an ACE-2 polypeptides and the product of the angiotensin converting enzyme-2 peptides. The inventive method identifies other potential substrates of ACE-2 polypeptides and the product of the compound with that of the reaction mixture after incubation indicates whether the test compound as converted into a new compound, in which case the test compound is a substrate of the ACE-2 polypeptide. This is the amino acid sequence of human angiotensin converting enzyme-2 (ACE-2) N720D mutant. Note: This sequence does not appear in the printed product of precification but has been created by the indexer using information given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          198
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                78

Pred. No, is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               peptidyl-dipeptidase A (EC 3.4.15.1), testis - mouse
NyAlternate names: peptidyl-dipeptidase I, testis
Cispecies: Mus musculus (house mouse)
Cispecies: Mus musculus (house mouse)
Cibate: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 09-Jul-2004
Ciracession: A35655

Deptidy1-dipeptidase A (EC 3.4.15.1) - chicken
NyAlternate names: anglotensin converting enzyme
C;Specises Gallus gallus (chicken)
C;Specises Gallus gallus (chicken)
C;Specises Gallus gallus (chicken)
C;Date: 16-Mar-1995 #sequence_revision 26-May-1995 #text_change 09-Jul-2004
C;Accession: JC2489
B;Csther, C.R.; Thomas Jr., K.E.; Bernstein, K.E.
Biochem. Biophys. Res. Commun. 205, 1916-1921, 1994
A;Title: Chicken lacks the testis specific isozyme of angiotensin converting enzyme founc
A;Reference number: JC2489

A,Note: several of the amino acids in reported are tentative
C,Comment: The pulmonary and testicular isoforms of this enzyme differ substantially in }
G;Comment: The two isoforms arise by alternative splicing of one gene.
C;Superfamily: mammalian peptidyl-dipeptidaes A
C;Superfamily: mammalian peptidyl-dipeptidaes A

peptidyl-dipeptidase A (BC 3.4.15.1) precursor - horn fly
peptidyl-dipeptidase A (BC 3.4.15.1) precursor - horn fly
NiAlernate names: anglocensin I-converting enzyme
C;Species Haematobia Irritans (horn fly)
R;Wijffelb, G.; Fitzgerald, C.; Gough, J.; Riding, G.; Elvin, C.; Kemp, D.; Willadsen, P.

                                                                                                                                                                                                                                                                                                                                                                                              558
                                                                  9
                                                                                  78
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The German cDNA consortium;
Submitted (NOV-2004) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Carboxypeptidase which converts angiotenain 1 to
angiotenain 1-9, a peptide of unknown function, and angiotensin II
to angiotensin 1-7, a vascdilator. Also able to hydrolyze apelin-
13 and dynorphin-13 with high efficiency. May be an important
regulator of heart function (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pongo pygmaeus (Orangutan).

COFACTOR: Binds 1 zinc ion per subunit (By similarity).
COFACTOR: Binds 1 chloride ion per subunit (By similarity).
SUBCELLULAR LOCATION: Type I membrane protein. Processing by ADAM17 may lead to a secreted protein (By similarity).
SIMILARITY: Belongs to the peptidase MZ family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 EMBL, CR857122; CAH89426.1; -; mRNA.
